PROFESSIONAL SUMMARY

Motivated Computer Science (Data Science) undergraduate at Sai Vidya Institute of Technology with a CGPA of 8.65/10, specializing in Machine Learning, Deep Learning, and AI application development. Experienced in building end-to-end ML pipelines, computer vision systems, and NLP models using Python, TensorFlow, and PyTorch. Proficient in REST API development with FastAPI, containerization with Docker, and model deployment workflows. Actively solving algorithmic problems on LeetCode and demonstrated competitive programming excellence with a Global Rank of 982 in TCS CodeVita.

EDUCATION

Sai Vidya Institute of Technology

B.E in Computer Science (Data Science) · 2023 – 2027

Bengaluru, Karnataka

CGPA: 8.65 / 10

Hanumanth Benne Govt. Pre University College

Completed 12th (PCMB) · 2021 – 2023

Kumta, Karnataka

TECHNICAL SKILLS

Languages: Python (OOP, Data Structures and Algorithms), SQL

Frameworks & APIs: Flutter, FastAPI, Langchain, REST API

Developer Tools: Git, Docker, VS Code, Jupyter Notebook, CI/CD

Libraries & ML: Pandas, NumPy, Matplotlib, Scikit-learn, TensorFlow, PyTorch, Librosa, OpenCV

Domains: Machine Learning, Deep Learning, Computer Vision, Natural Language Processing (NLP), Model Deployment, Audio Processing

PROJECT EXPERIENCE

Medgemma Insight | [GitHub](#) | [Demo](#)

Python · MedGemma Model · Computer Vision · Deep Learning · Model Deployment

- Developed a medical AI diagnostic tool using the MedGemma model to analyze medical imagery, achieving high-precision automated disease detection.
- Implemented image preprocessing pipelines using OpenCV to enhance feature extraction, improving model input quality by ~25%.
- Optimized model inference time by 30%, enabling near real-time diagnostic feedback suitable for clinical assistance workflows.

Video Sentiment Analysis System | [GitHub](#)

Python · MELD Dataset · Deep Learning · NLP · Multimodal Fusion

- Built an end-to-end sentiment analysis pipeline using the MELD dataset to classify 7 emotion classes across video and audio streams.
- Improved classification accuracy by 18% by fusing visual facial expression features with textual NLP sentiment embeddings (multimodal approach).
- Integrated a real-time scoring dashboard to visualize emotional shifts, reducing manual review time for video analysis by 40%.

Audio Stem Separation System | [GitHub](#)

Python · Deep Learning · Librosa · Spleeter / Wave-U-Net · Audio Processing

- Developed an AI-powered audio processing tool to isolate individual stems (Vocals, Drums, Bass, Other) from mixed audio with professional-grade accuracy.
- Utilized Short-Time Fourier Transform (STFT) and Inverse STFT for high-fidelity audio reconstruction, reducing stem bleed artifacts by ~35%.
- Optimized deep learning model inference pipeline to process a 3-minute audio track in under 20 seconds on CPU.

ACHIEVEMENTS & CERTIFICATIONS

- TCS CodeVita: Achieved a Global Rank of 982 in Round 2 among 100,000+ participants, demonstrating elite-level competitive programming skills.
- Competitive Programming: Consistently active on LeetCode with strong proficiency in Python-based problem-solving across Data Structures and Algorithms. [LeetCode Profile](#)
